

It's the dawn of the new era of accelerated environmental permitting!

## How much is \$2,500,000 revenue worth?

There are three costs of environmental permitting. **Direct costs** are the checks you write as you go through the process. **Indirect costs** are the time and money you and your staff spend on permitting issues rather than on other vital matters. **Lost opportunity costs** are revenues foregone while you wait for your permits. *Accelerated environmental permitting* reduces lost opportunity costs; the recovered revenues may exceed other expenses. At current gold prices, for each month the process is accelerated you gain potential revenue of at least \$2.5 million.

Gold is selling for \$600.00 per ounce. A mine producing 50,000 ounces per year has \$30 million gross revenue; that's \$2.5 million per month. Reduce permitting time by one month and recover that revenue. Uranium oxide is selling for \$47.25 per pound. A mine producing 300 tons per year and saving one month in permitting recovers \$2.4 million from otherwise lost opportunity revenue.

We are the *Environmental Permitting Accelerators*™. We complement the efforts of your primary environmental consultant by reducing the factors that traditionally cause delays and increase your lost opportunity costs. All our work is technically sound, legally defensible, timely, and highly cost effective.

If your environmental permitting takes longer than it could, and you suffer large lost opportunity costs, how much would you invest to recover those costs?

Call us today and discover if we could assist your primary consultant in accelerating your environmental permitting: 503-667-4517.
